The new driverless version of our dongle emulator is completely integrated into Cubase SX 3. Furthermore, it has been rewritten from scratch and no longer requires any Windows Device Manager or.sys files. This dongle can be used to test the M-Audio DUO UAD-2 ASIO soundcard on Cubase SX 3. Once the dongle is setup properly, it will bypass any input latency, bypass possible glitches and gives the audio signal processed by the soundcard as directly as possible, without input latency at all. This new driverless version of our dongle emulator requires only the Cubase SX 3 3.1 installation CD. It is not to be used with Cubase SX 3.0 or earlier versions. This dongle is compatible with Cubase SX 3.1, CSX Elements, CSX Native and CSX/LE which means it will also work with the new CSX Express versions. Instructions on how to install and use our dongle are provided below. For more details, please read the README file included with the dongle and the dedicated CSX 3 documentation.
